## SERVICE AVAILABILITY

From rural or suburban communities to urban population centers, the expansive range of WorldCom's fixed wireless service will often serve as the first available broadband access method. In other markets, it will be a competitive alternative to existing broadband services. Our wireless networks are designed to offer local customers the high-speed Internet access needed in today's competitive business environment, as well as to provide broadband Internet connectivity to areas that have remained underserved by "wired" networks.

Unlike DSL, which cannot provide service beyond approximately three miles from the local telephone switching office, Broadband Wireless Access can reach customers within 35-miles\* of our centrally located tower. This broad coverage area allows WorldCom<sup>SM</sup> to more efficiently serve dense cities, small towns and geographically dispersed markets.

\*Please note that Fixed Wireless connectivity is dependent upon a preliminary site survey at the customer's location.

**WorldCom Broadband Wireless Access is currently available in the following markets and surrounding areas\*\*:**

<b>Bakersfield, CA -</b>	Taft, Wasco, Shafter, Delano, Tehachapi, Lamont, Frazier Park, Arvin, Mc Farland, Buttonwillow, Lebec, Maricopa, Fellows, Monolith, Caliente
